EDC IIT DELHI · PITCH

Kisan Carbon Hub

Every farm, a carbon asset.

Register land → measure carbon → earn & trade carbon credits. Built for the Indian farmer.

Founder: Shivam Kumar **Stage:** Pre-seed · Product live **Demo:** carbon-cre.netlify.app **2026**

THE PROBLEM

Farmers feed the planet — but can't sell its biggest benefit

01

Invisible value

Trees, healthy soil and clean practices pull carbon out of the air — yet a smallholder earns **$0** for it.

02

Locked out of markets

Carbon credits demand measurement, verification and paperwork that no 2-acre farmer can navigate alone.

03

No farmer-grade tool

Existing platforms are English-only, enterprise-priced and built for brokers — not for the field.

146M+

farm holdings in India

2070

India's net-zero commitment

<1%

of farms earning carbon revenue today

OUR SOLUTION

One platform: from field to credit

A vernacular-first, mobile-first system that turns a farm's real-world data into verified, tradable carbon credits — without the farmer ever seeing a spreadsheet.

Register land → Measure trees, land & vehicles → Auto-generate credits → Sell on marketplace → Get paid to wallet

Map-based

Draw your field on satellite imagery — area auto-calculated in hectares.

Live GPS

Real location capture for boundaries, plots and survey points.

Drone MRV

Grid survey missions verify canopy & coverage from the air.

Live pricing

Credits valued against live market rates, paid into a wallet.

THE PRODUCT

A working platform — not a slide

01

Farmer Hub

Lands, trees, vehicles, wallet & credit balance.

02

Credit Calculator

Land type + trees → credits & live market value.

03

Drone Command

Live camera, grid missions, DIY build guide.

04

Marketplace

List, buy & sell credits with payments & wallet.

05

Admin Console

Farmer KYC, verification & listing approvals.

Live & deployed | Auth + OTP | Postgres database | Satellite maps | Payments-ready

End-to-end flow working today: registration → OTP → land & trees → credit calculation → marketplace listing.

HOW IT WORKS · MRV

Measurement you can actually trust

STEP 01

Map the land

Farmer draws the field boundary on a live satellite map. Area & perimeter are computed instantly in hectares.

STEP 02

Survey from the air

A survey drone flies an auto-generated grid over the plot, capturing canopy & coverage with a live FPV feed.

STEP 03

Convert to credits

Emission factors + field data + live prices → verified credits, listed on the marketplace automatically.

Boundary drawn on satellite map	**auto area (ha)**
Drone grid mission + live GPS capture	**canopy verified**
Credits generated & listed	**₹ into wallet**

MRV = Measurement, Reporting & Verification — the core cost centre we automate.

MARKET OPPORTUNITY

Carbon is finally being priced — farms still aren't paid

TAM

$10B+

Global voluntary carbon market projected by 2030 (industry estimate).

SAM

Nature

India's nature-based & agricultural credits — the fastest-growing credit class.

SOM

500

Farms across 3 pilot districts in Uttar Pradesh in Year 1.

- India's **Carbon Credit Trading Scheme (2023)** creates a domestic price for credits.
- Corporates need credible, farm-level offsets to hit their net-zero pledges.
- FPOs & co-ops already aggregate farmers — our natural distribution channel.

BUSINESS MODEL

We earn when the farmer earns

01

Marketplace commission

10–15% take-rate on every credit sold between farmers and buyers.

02

Verification SaaS

Monthly per-farm fee for FPOs & enterprises needing audit-ready MRV.

03

Aggregation & offtake

We bundle small plots into corporate-grade credit bundles at a spread.

04

Enterprise data

Carbon & ESG reporting APIs sold to agri-business and insurers.

Landlord farmer → free | **FPO plan → ₹ per farm / yr** | **Enterprise → custom contract**

Unit economics improve as verification cost falls with drone-based measurement.

TRACTION & STATUS

Shipped, deployed and working

- Full platform live on the web — authentication, OTP & secure database.
- Land registration with satellite boundary drawing & hectare calculation.
- Tree & vehicle carbon tracking with live credit valuation.
- Carbon marketplace with listings, wallet & payment flow.
- Drone command centre: live FPV, grid missions, connect guide.
- Admin panel for farmer verification & listing approval.

NEXT 90 DAYS

Pilot	**1 FPO · 500 farms · 3 districts**
Verification	**Partner with a accredited verifier**
Language	**Hindi + 2 regional languages**
Mobile	**Android app for field agents**

COMPETITION & OUR EDGE

Built for the field, not the boardroom

APPROACH	FARMER-FIRST	DRONE MRV	ALL-IN-ONE	AFFORDABLE
Manual consultants	—	—	—	—
Global carbon platforms	—	Partial	Partial	—
Agri-tech apps	Yes	—	—	Yes
Kisan Carbon Hub	**Yes**	**Yes**	**Yes**	**Yes**

Our moat

Drone + map based MRV cuts the biggest cost in carbon markets — verification.

Distribution

Embedded in FPOs & co-ops, not sold top-down to corporates.

Data flywheel

Every surveyed plot improves our emission factors & pricing models.

GO-TO-MARKET

Land with one FPO, scale by state

1

Pilot

One FPO, 500 farms in a single district. Prove credit yield & farmer payout.

2

Scale

Roll out across UP, MP & Punjab via co-ops and Krishi Vigyan Kendras.

3

Offtake

Sign corporate buyers needing credible, farm-level carbon offsets.

4

Platform

Open API for verifiers, insurers & lenders to plug into field data.

FPOs & co-ops

Krishi Vigyan Kendras

Banking correspondents

Agri-input partnerships

TEAM

Builder-led, hiring for the field

FOUNDER

Shivam Kumar

Product, engineering & design. Built the entire platform end-to-end — web, maps, database and drone command.

HIRING

MRV / Carbon Lead

Verification standards, emission factors and accreditations.

HIRING

Field Operations

FPO partnerships, pilot rollout and drone survey teams.

Advisors in progress: agronomy, carbon-market compliance and rural distribution.

THE ASK

Raising ₹25 Lakh pre-seed

Product & MRV engineering	40%
Pilot operations (3 districts)	30%
Verification & certification	20%
Go-to-market & outreach	10%

Figures are indicative — happy to walk through the detailed plan and unit economics.

WHAT IT UNLOCKS

- First verified carbon credits sold from real Indian farms.
- 500-farm pilot with a signed FPO partner.
- Hindi app for field agents.
- Data to raise a larger seed round.

— THE VISION

If farms get paid for carbon they already capture, we build India's largest distributed carbon asset class.
